Professional Summary

Software Engineer with **3+** years of experience specializing in **Backend Development, Telegram Bot Automation, and DevOps**. Proficient in building scalable **REST APIs**, managing **relational/NoSQL databases**, and **integrating AI models into production services**. Experienced in **Linux server administration, CI/CD pipelines, containerization, and Clean Architecture.**

EXPERIENCE

Backend & Telegram Bot Developer / shayteck.com

October 2024 - PRESENT | Remote/Tehran, Iran

- Developed backend solutions for **22+** projects using **TypeScript**, **Node.js**, **Express.js**, and **Python (FastAPI)**.
- Designed **ERDs** and managed databases: **MySQL, PostgreSQL, SQLite, SQL Server, MongoDB.**
- Integrated **OpenAI/Gemini/ChatGPT APIs** for **prompt engineering**, generating **structured JSON** to **automate landing page creation.**
- Configured **NGINX** to manage subdomains and customer domains for automated webpage deployment.
- Built real-time financial systems using **WebSocket** to track live charts, manage gold trading volumes, and balance user accounts.
- Developed a tennis match tracking system via **Telegram Bot** using **grammY, TypeScript, and Prisma ORM.**
- Created a **media streaming bot** for Telegram Voice Calls using **yt-dl**, **gramjs-call,** and **FFmpeg.**
- Engineered an **automated trading signal bot** that validates signals, checks live charts, opens positions, and notifies users via Telegram.
- Managed **Linux server administration, monitoring, deployment, and security**.
- Implemented **Git** version control, **Jest** testing, and **Winston logging** protocols.

Backend Developer / Sodev

March 2024 - September 2024 | Babol, Mazandaran, Iran

- Contributed to **SoService**: A modern **Docker-based** hosting platform for multi-framework applications.
- Developed **automated static page deployment** by configuring **NGINX** to resolve IPs and domains dynamically.

- Enabled users to host apps via source upload or **GitHub connection** with automatic **Dockerfile** generation.
- Managed isolated **Docker containers** for **PostgreSQL, MySQL, MariaDB, MongoDB,** and **Redis.**
- Implemented **custom domain attachment** and **HTTPS enablement** features.
- Built a **Telegram bot** connected via **WebSocket** for **real-time container monitoring** and **management**.

Programming Instructor (TeachingAssistant) / Babol Noshirvani University of Technology
January 2024 - October 2024, Babol, Mazandaran, Iran

- Taught **Object-Oriented Programming (OOP)** using **Java** to undergraduate students.
- Instructed on **Classes, Inheritance, Encapsulation, Polymorphism, and software design principles.**
- Assisted students with **debugging, code reviews,** and **project guidance.**

EDUCATION

B. S. Computer Engineering

Babol Noshirvani University of Technology
Sep 2022 - Present

Major: Software Engineering | Minor: Artificial Intelligence

Relevant Coursework: Advanced Programming (19/20), Mathematics (19/20), Databases (17/20), Web Programming (18/20), Specialized Languages (17/20)

Technical Skills

Languages: TypeScript, JavaScript, Python, Java, C#, C++, Go, SQL

Backend: Node.js, Express.js, FastAPI, ASP.NET, .NET, Fiber, Gin, Prisma ORM

Databases: MySQL, PostgreSQL, SQLite, SQL Server, MongoDB, Redis, MariaDB

DevOps & Tools: Docker, NGINX, Git, CI/CD, Linux/Ubuntu Server, Jest, Winston, Shell Scripting

APIs & Services: OpenAI API, Gemini API, ChatGPT API, WebSocket, REST, Telegram Bot API (grammY)

Frontend (Basic): React, HTML5, CSS3

Concepts: Clean Architecture, Microservices, OOP, AI Prompt Engineering
